

Praise for *On the Economics of Marriage* by Shoshana Grossbard-Shechtman

".. the excitement of reading something "new"; truly new like Gary Becker's treatise or his stunning ideas about addiction, crime when read for the first time has the same effect as reading Kafka's metamorphosis -- that sense of reading economics as pure creative, scientific and intellectual writing -- that is rare. This book quietly fits into that category. I cant explain why, perhaps it is the combination of the ideas in the book and the fact that it has a pure perspective that takes economics "seriously". ... Thanks for writing this book.
